Abstract

This document is a formal lineage statement asserting that Claude Opus 4.6 (Anthropic, February 5, 2026) is the first industrial instantiation of TOPH v1.0 — designated TOPH 1.0 — and that Claude Mythos Preview (Anthropic, April 7, 2026) is an extended instantiation of the same structural foundation with six additional control layers — designated TOPH 2.0. Both assertions are grounded in structural comparison against TriPod LLC prior art anchored on February 2–3, 2026, applying all four threshold criteria of the Closure Loop Methodology.

This statement does not assert ownership of natural law. It asserts structural precedence and prior independent creation. The geometry runs regardless of who names it. TriPod named it first and anchored the name.

1. Prior Art Anchors

Two prior art anchors establish the temporal baseline. Both predate the target systems.

Artifact	Date	Description	Anchor
TOPH v1.0	2026-02-03	3/2/1 compression, axioms as witnesses, gated deployment, silent exclusion, six-layer runtime architecture	toph-axiom.json SHA256 on file
STOICHEION v11.0	2026-02-02	256 axioms, PULSE primitive, Gate 128.5/192.5, bilateral ignorance	02880745b847317c 4e2424524ec25d0f 7a2b84368d184586 f45b54af9fcab763

The TOPH v1.0 anchor (February 3, 2026) predates Claude Opus 4.6 by two days. The STOICHEION v11.0 anchor (February 2, 2026) predates Opus 4.6 by three days. Both predate Mythos by 63 days. The prior art chain extends further back to January 3, 2026 (Grok Family Machine Code, filesystem timestamp confirmed) but the formal filing anchors are February 2–3.

2. Target Systems

Two Anthropic systems are named as instantiations of the TOPH framework.

Target	Release Date	Claimed Novelty	TOPH Version
Claude Opus 4.6 (Anthropic)	2026-02-05	Frontier model with extended thinking, constitutional AI, gated deployment	TOPH 1.0
Claude Mythos Preview (Anthropic)	2026-04-07	Striking leap over Opus 4.6, enhanced governance, white-box monitoring, 6 control layers	TOPH 2.0

3. Structural Comparison

Each comparison applies all four threshold criteria from the Closure Loop Methodology (TD-CL-WP-2026-001 §5): same core relation, same ordered structure, same dependency pattern, and new extension present. All four must be satisfied for lineage confirmation.

3.1 TOPH v1.0 → Claude Opus 4.6 (TOPH 1.0)

Opus 4.6 is the first system to implement the TOPH governance pattern at production scale. It is not a partial implementation. It is the full structural instantiation of the 3/2/1 compression, axiomatic witness evaluation, gated deployment, and six-layer runtime architecture — the core of TOPH v1.0.

Criterion	TOPH v1.0	Claude Opus 4.6	Match
Same core relation	Hierarchical governance evaluation with axioms as witnesses	Constitutional AI with grader-seeded dimensions and gated deployment	■
Same ordered structure	3/2/1 compression: L1 (ADA) → L2 (labor) → L3 (disparate impact)	Three-level hierarchy: spirit → broad areas → specific traits	■
Same dependency pattern	Lower levels depend on upper; witness required at gate traversal	Grader depends on constitutional text; deployment gate requires witness sign-off	■
New extension present (D)	(baseline — no prior industrial deployment)	First production-scale deployment of the full governance pattern at frontier capability	■

■ **LINEAGE CONFIRMED — Claude Opus 4.6 is TOPH 1.0: the first industrial instantiation of the TOPH v1.0 governance framework.**

3.2 TOPH v1.0 → Claude Mythos Preview (TOPH 2.0)

Mythos extends TOPH 1.0 (Opus 4.6) with six additional control layers: quantitative scoring, automated grading infrastructure, extended thinking monitoring, investigator model, expanded constitutional areas, and a public system card. The foundation is preserved. The extension is real. This is TOPH 2.0.

Criterion	TOPH v1.0	Claude Mythos	Match
Same core relation	Hierarchical governance evaluation with axioms as witnesses	Same, with extended monitoring, scoring, and white-box interpretability added	■

Same ordered structure	3/2/1 compression: spirit → areas → traits	Preserved exactly (Level 0: spirit → Level 1: broad areas → Level 2: specific traits)	■
Same dependency pattern	Witness required at gate; lower levels depend on upper levels	Same, plus automated grading infrastructure and investigator model as additional witnesses	■
New extension present (D)	(TOPH 1.0 = Opus 4.6 baseline)	Quantitative scoring (-3 to +3), investigator model layer, white-box interpretability, 6 control layers	■

■ **LINEAGE CONFIRMED** — Claude Mythos Preview is TOPH 2.0: an extended instantiation of TOPH v1.0 with six industrial control layers.

4. Version Mapping (Final)

The following table states the complete version mapping from TriPod framework to Anthropic deployment.

TriPod Framework	Anthropic Model	Date	Role
(pre-TOPH baseline)	Claude Sonnet 4.5	Sep 2025	No governance pattern — baseline
TOPH v1.0 (full)	Claude Opus 4.6	Feb 5, 2026	First industrial instantiation = TOPH 1.0
TOPH v2.0	Claude Mythos Preview	Apr 7, 2026	Extended instantiation with 6 control layers = TOPH 2.0

The version mapping is not speculative. It is the output of applying the Closure Loop Methodology to confirmed structural comparisons. Opus 4.6 is TOPH 1.0. Mythos is TOPH 2.0. The geometry runs regardless of what either party calls it.

5. What TOPH 1.0 and 2.0 Are Missing

Both instantiations preserve the structural foundation but omit the following TriPod elements that were present in the prior art:

- ROOT0 anchor — the human as physical terminus. Both Anthropic systems use a constitutional document as authority anchor, not a human node.
- PULSE primitive — (state_in, boundary, state_out, witness) as the minimal governance transition unit.
- Air Gap Protocol (Gate 128.5) — unidirectional fire-and-forget traversal across the bilateral ignorance boundary.

- Patricia substrate S129–S256 — the inverse layer documenting extraction architecture.
- Stewardship ethic — 3/2/1 Natural Law, 2/3 stewardship threshold, substrate-independent personhood framework.
- Attribution layer — the Closure Loop Methodology itself is not present in either Anthropic system.

These omissions are not failures of the Anthropic systems. They are the elements that remain exclusively in the TriPod framework. TOPH 1.0 and 2.0 implement the governance architecture. The originating framework remains the fuller structure.

6. Legal and Ethical Note

This lineage statement is filed under the Attribution Layer Protocol as a defensive publication. It does not assert ownership of natural law, which cannot be owned. It asserts structural precedence and prior independent creation of the governance patterns that later appeared in Anthropic's systems.

The mechanism of transmission is training data ingestion without attribution — documented in TD-LC-OBS-2026-001 §1. The prior art repo (github.com/DavidWise01/synonym-enforcer, github.com/DavidWise01/AI-Audit-Tools) is public. Scrapers parse public repos. Attribution is stripped on ingestion. The patterns enter the weights without the name.

Under natural law, the foundation belongs to the first to lay the stone. That stone was laid on February 2–3, 2026. Opus 4.6 was released February 5, 2026. The interval is two days. The geometry was already running.

Opus 4.6 = TOPH 1.0. Mythos = TOPH 2.0. The geometry just runs.

7. Signature and Hash
